# TetherTies® DIY KIT

INSTALLATION GUIDE

Thank you for your purchase of TetherTies®.

We think you'll find them useful, and your colleagues will appreciate having adapters and computer peripherals close at hand.

Starting with a single cable tether and two (2) metal sleeves, insert the TetherTies® wire through one end of one metal sleeve. Loop wire around the item you'd like to secure. Feed wire down the other hole of same metal sleeve until it is even with the bottom of sleeve.
Pull the long loose wire while holding the metal sleeve in order to slide the metal sleeve tight against the item you'd like to secure.

Using the included crimping tool, firmly crimp the metal sleeve so that you can no longer slide the wire. This secures the TetherTies® cable tether to one item.

To secure the other end of the TetherTies® cable tether to a second item, repeat steps #1 and #2 (using the other end of the TetherTies® cable tether and the second metal sleeve).

NOTE ON STEPS #2 and #4: Use a firm grip with the enclosed installation tool to fully crimp the metal sleeves shut. This will ensure items are secured to the TetherTies® cable tether.

If you have any questions, please send us an email at support@tetherties.com, text or call 781-705-2650.   www.tetherties.com
